Ms. Ingrid Hopkins  
Water Protection Division  
(3WP42) USEPA Region III  
1650 Arch Street  
Philadelphia, PA 19103-3029

**Re: Benning Facility Consent Decree (Civil Action No. 1:15-cv-018450) - Quarterly Status Reports for April - June 2020**

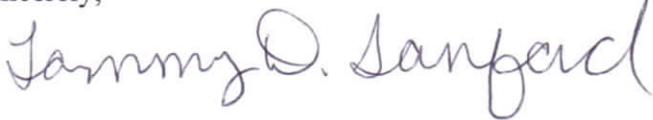

Dear Ms. Hopkins,

In accordance with Paragraph 68 of the Benning Facility Consent Decree, please find attached the following reports for the period of April - June 2020:

1. Copies of monthly and quarterly discharge monitoring reports
2. Status of annual inspection of the drainage system
3. Storm drain inlets inspection logs
4. Monthly site-wide inspection summary and logs
5. Status of Stormwater Treatment System
6. Stormwater management training
7. Stormwater pollution prevention plan updates
8. Change in management responsibilities
9. Status of completion of transformer storage shed
10. Status of Stormwater Retention Project
11. Description of non-compliance with effluent limits

The certification statement is also attached. Please contact me at 412-400-7216 or [tammy.sanford@exeloncorp.com](mailto:tammy.sanford@exeloncorp.com), if you have any questions or need additional information.

Sincerely,

Tammy Sanford  
Manager, Environmental Management

# Memorandum

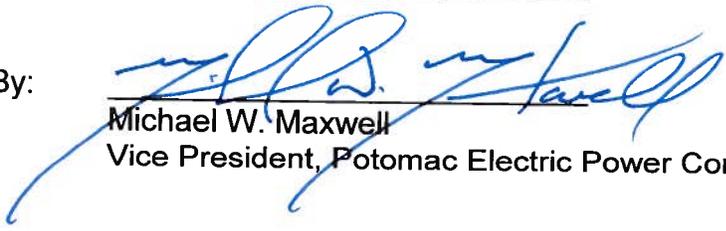

## DELEGATION OF SIGNATURE AUTHORITY

**Tammy D. Sanford:** You hereby are delegated the authority in your position as **Manager, Environmental Management** to execute on behalf of **Potomac Electric Power Company** regulatory certifications/reports/applications required to be submitted to governmental agencies and other regulatory bodies. Examples of such certifications/reports include those required to be submitted pursuant to local, state or federal environmental, tax, utility, employment, and labor regulations or laws, and those required by any electric reliability council or other non-governmental quasi-regulatory requirements that mandate the signature of a representative with personal knowledge of factual information. For this delegation authority to remain valid you must keep a copy of each executed document on file that you have signed on behalf of **Potomac Electric Power Company**. **Potomac Electric Power Company** agrees to indemnify you to the fullest extent permitted by law, now or hereafter in force, for liability incurred in connection with executing such certifications/reports, as long as you act within the scope of the authority outlined herein. **Potomac Electric Power Company** will not indemnify you for executions that do not conform to this delegation authority, or executions that you make in bad faith, with deliberate dishonesty, for personal profit, or where there is reason for you to believe that the execution is illegal.

#### Submission Note

If a parameter row does not contain any values for the Sample nor Effluent Trading, then none of the following fields will be submitted for that row: Units, Number of Excursions, Frequency of Analysis, and Sample Type.

#### Edit Check Errors

No errors.

#### Comments

Copper (Cu) was sampled on June 4th (5.4 ppb / 2nd analysis-5.5 ppb), June 17 (5.1 ppb) and June 25th (1.6 ppb) resulting in a monthly average of 4.05 ppb and a maximum of 5.5 ppb

**Sources:**

- (a) Microbac, 2020 Second Quarter Sample Analytical Results Microbac Laboratories, Inc.  
 (b) USEPA, 2009a. Authorization to Discharge Under the National Pollutant Discharge Elimination System Industrial Permit Number: DC0000094. United States Environmental Protection Agency. Effective July 19, 2009.  
 (c) Maximum Daily Limit listed in the 2009 NPDES Permit

Prepared by: EFT 7/21/2020

**Notes:**

cfs - cubic feet per second      mg/L - milligrams per liter      mg/s - milligrams per second  
 NA - Not applicable      NS - Not sampled

Copper Only (Flows, Avg and Max)  
 CFS - Avg = 5.39, Max = 10.41  
 MGD - Avg = 3.4815, Max = 6.7271

- <sup>(1)</sup> Pollutant concentration was not detected. Concentration used in pollutant load calculation is set to zero.  
<sup>(2)</sup> Analysis was performed twice on the sample, value shown is the average of the two results  
<sup>(3)</sup> Not required by 2009 NPDES Permit for Benning Generating Station.  
<sup>(4)</sup> Data from the September 5, 2011 sampling event for Manhole K was established as the baseline load because it was the first sample collected after Manhole K was retrofitted. The retrofit was performed so that a representative sample could be collected from Manhole K. Flow was estimated based on the storm intensity and catchment area.  
<sup>(5)</sup> No maximum daily limit is listed. Value is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.  
<sup>(6)</sup> Manhole K has no maximum daily limit for the constituent and is monitoring only. Value listed is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.  
<sup>(7)</sup> Positive values indicates that the concentrations are lower than the maximum daily limit for the pollutants.  
<sup>(8)</sup> Positive values indicate that the concentrations/loads are lower than the baseline concentrations/loads.  
<sup>(9)</sup> There were no detections of PCB Aroclors. Therefore, a baseline flow was not established. However, given that the concentration of PCB Aroclors is zero, the load is also zero regardless of flow.  
<sup>(10)</sup> Baseline concentrations are based on the highest concentration listed on DMRs for Outfall 013Q from 2005 to 2007. TSS was not reported on DMRs until 2009. Therefore, the baseline concentration for TSS is from the highest concentration listed on the Jul-Sep 2009 to 2010 DMRs for Outfall 013Q.

### Permit

**Permit ID:** DC0000094 **Major:**

**Permittee:** PEPCO Environment Management Services **Permittee Address:** 701 Ninth Street, NW, Room 6219  
ATTN: Denise Campbell  
WASHINGTON , DC20019

**Facility:** PEPCO - BENNING **Facility Location:** 3300 BENNING ROAD, N.E.  
WASHINGTON , DC20019

**Permitted Feature:** 101 - External Outfall **Discharge:** 101-Q - (no description)

**Report Dates & Status** **DMR Due Date:** 07/28/20

**Monitoring Period:** From 04/01/20 to 06/30/20

### Status: NetDMR Validated

### Considerations for Form Completion

These discharges shall be monitored at manhole K for outfall 101.

### Principal Executive Officer

**First Name:** Robert **Last Name:** Pinto  
**Title:** VP Operations **Telephone:** 847-816-5314

### No Data Indicator (NODI)

**Submission Note**

If a parameter row does not contain any values for the Sample nor Effluent Trading, then none of the following fields will be submitted for that row: Units, Number of Excursions, Frequency of Analysis, and Sample Type.

**Edit Check Errors**

No errors.

### Comments

Additional samples are being taken at Inlet 87 to gather enough information to design a treatment system for achieving compliance with the expected limits in the new NPDES permit for Outfall 101Q. Almost all of the previous data captured since 2009 has been a composite of multiple inlets and may not be representative of Inlet 87.

 (c) Maximum Daily Limit listed in the 2009 NPDES Permit

Prepared by: EFT 7/21/2020

**Notes:**

- cfs - cubic feet per second                      mg/L - milligrams per liter                      mg/s - milligrams per second  
 NA - Not applicable                                      NS - Not sampled

Flows( Avg and Max) - 2nd Qtr  
 CFS - (Avg = 0.0380, Max = 0.0437)  
 MGD - (Avg = 0.0246, Max = 0.0283)

<sup>(1)</sup> Pollutant concentration was not detected. Concentration used in pollutant load calculation is set to zero.

<sup>(2)</sup>

<sup>(3)</sup> Not required by 2009 NPDES Permit for Benning Generating Station.

<sup>(4)</sup> Data from the September 5, 2011 sampling event for Manhole K was established as the baseline load because it was the first sample collected after Manhole K was retrofitted. The retrofit was performed so that a representative sample could be collected from Manhole K. Flow was estimated based on the storm intensity and catchment area.

<sup>(5)</sup> No maximum daily limit is listed. Value is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.

<sup>(6)</sup> Manhole K has no maximum daily limit for the constituent and is monitoring only. Value listed is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.

<sup>(7)</sup> Positive values indicates that the concentrations are lower than the maximum daily limit for the pollutants.

<sup>(8)</sup> Positive values indicate that the concentrations/loads are lower than the baseline concentrations/loads.

<sup>(9)</sup> There were no detections of PCB Aroclors. Therefore, a baseline flow was not established. However, given that the concentration of PCB Aroclors is zero, the load is also zero regardless of flow.

<sup>(10)</sup> Baseline concentrations are based on the highest concentration listed on DMRs for Outfall 013Q from 2005 to 2007. TSS was not reported on DMRs until 2009. Therefore, the baseline concentration for TSS is from the highest concentration listed on the Jul-Sep 2009 to 2010 DMRs for Outfall 013Q.

 (c) Maximum Daily Limit listed in the 2009 NPDES Permit

Prepared by: EFT 7/21/2020

**Notes:**

cfs - cubic feet per second                      mg/L - milligrams per liter                      mg/s - milligrams per second  
 NA - Not applicable                                      NS - Not sampled

Flows( Avg and Max) - 2nd Qtr  
 CFS - (Avg = 0.0380, Max = 0.0437)  
 MGD - (Avg = 0.0246, Max = 0.0283)

<sup>(1)</sup> Pollutant concentration was not detected. Concentration used in pollutant load calculation is set to zero.

<sup>(2)</sup>

<sup>(3)</sup> Not required by 2009 NPDES Permit for Benning Generating Station.

<sup>(4)</sup> Data from the September 5, 2011 sampling event for Manhole K was established as the baseline load because it was the first sample collected after Manhole K was retrofitted. The retrofit was performed so that a representative sample could be collected from Manhole K. Flow was estimated based on the storm intensity and catchment area.

<sup>(5)</sup> No maximum daily limit is listed. Value is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.

<sup>(6)</sup> Manhole K has no maximum daily limit for the constituent and is monitoring only. Value listed is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.

<sup>(7)</sup> Positive values indicates that the concentrations are lower than the maximum daily limit for the pollutants.

<sup>(8)</sup> Positive values indicate that the concentrations/loads are lower than the baseline concentrations/loads.

<sup>(9)</sup> There were no detections of PCB Aroclors. Therefore, a baseline flow was not established. However, given that the concentration of PCB Aroclors is zero, the load is also zero regardless of flow.

<sup>(10)</sup> Baseline concentrations are based on the highest concentration listed on DMRs for Outfall 013Q from 2005 to 2007. TSS was not reported on DMRs until 2009. Therefore, the baseline concentration for TSS is from the highest concentration listed on the Jul-Sep 2009 to 2010 DMRs for Outfall 013Q.

 (c) Maximum Daily Limit listed in the 2009 NPDES Permit

Prepared by: EFT 7/21/2020

**Notes:**

cfs - cubic feet per second                      mg/L - milligrams per liter                      mg/s - milligrams per second  
 NA - Not applicable                                      NS - Not sampled

Flows( Avg and Max) - 2nd Qtr  
 CFS - (Avg = 0.0380, Max = 0.0437)  
 MGD - (Avg = 0.0246, Max = 0.0283)

<sup>(1)</sup> Pollutant concentration was not detected. Concentration used in pollutant load calculation is set to zero.

<sup>(2)</sup>

<sup>(3)</sup> Not required by 2009 NPDES Permit for Benning Generating Station.

<sup>(4)</sup> Data from the September 5, 2011 sampling event for Manhole K was established as the baseline load because it was the first sample collected after Manhole K was retrofitted. The retrofit was performed so that a representative sample could be collected from Manhole K. Flow was estimated based on the storm intensity and catchment area.

<sup>(5)</sup> No maximum daily limit is listed. Value is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.

<sup>(6)</sup> Manhole K has no maximum daily limit for the constituent and is monitoring only. Value listed is the Maximum Daily Stormwater Discharge Concentrations Goals for Metals listed in Section VIII.E of the 2009 NPDES Permit for Benning Generating Station.

<sup>(7)</sup> Positive values indicates that the concentrations are lower than the maximum daily limit for the pollutants.

<sup>(8)</sup> Positive values indicate that the concentrations/loads are lower than the baseline concentrations/loads.

<sup>(9)</sup> There were no detections of PCB Aroclors. Therefore, a baseline flow was not established. However, given that the concentration of PCB Aroclors is zero, the load is also zero regardless of flow.

<sup>(10)</sup> Baseline concentrations are based on the highest concentration listed on DMRs for Outfall 013Q from 2005 to 2007. TSS was not reported on DMRs until 2009. Therefore, the baseline concentration for TSS is from the highest concentration listed on the Jul-Sep 2009 to 2010 DMRs for Outfall 013Q.

### Permit

**Permit ID:** DC0000094 **Major:**

**Permittee:** PEPCO Environment Management Services **Permittee Address:** 701 Ninth Street, NW, Room 6219  
ATTN: Denise Campbell  
WASHINGTON, DC20019

**Facility:** PEPCO - BENNING **Facility Location:** 3300 BENNING ROAD, N.E.  
WASHINGTON, DC20019

**Permitted Feature:** 201 - External Outfall **Discharge:** 201-A - INTERNAL MONITORING PT. 201

**Report Dates & Status** **DMR Due Date:** 07/31/20

**Monitoring Period:** From 04/01/20 to 06/30/20

**Status:** **NetDMR Validated**

### Considerations for Form Completion

OIL/WATER SEPARATOR, DEMINERALIZER/REGENERATION WASTEWATER, BOILER BLOWDOWN, SUMP FOR GROUNDWATER INFILTRATION, FIRESIDEWASHING

### Principal Executive Officer

**First Name:** Robert **Last Name:** Pinto  
**Title:** VP Operations **Telephone:** 847-816-5314

Paragraph 68.a.(2) of the Consent Decree

#### Annual Inspection of the Drainage System

The annual CCTV inspection of the stormwater drainage system was completed in April 2020. No major issues were found but several areas were identified for repair as part of Pepco's continuing efforts to improve the drainage system and reduce the potential for stormwater contamination. The specific areas for repair will be finalized once bids are received but the tentative repair plan includes:

- Four areas where pipes have been abandoned but are still connected to the existing stormwater infrastructure. These are areas where sediment and debris can build up and could be re-entrained back in the stormwater system during larger rain events.
- Two areas where access manholes have been covered by asphalt or landscaping and are not accessible. Regaining access to these areas will allow for cleaning and future CCTV investigation into lines which are currently inaccessible.
- Two areas where the paving has either deteriorated or gravel is no longer being contained within the road shoulder so that debris and loose gravel is getting into the stormwater system.
- One area where the drainage structure has deteriorated so that gravel and other debris is making its way into the stormwater system.

Final bids from the contractors are expected shortly with the work to start in August 2020.

#### Outfall 101 Investigation

PEPCO started in the 2<sup>nd</sup> quarter to increase the sampling of stormwater at Inlet 87 in anticipation of the new NPDES permit that will set limits for stormwater associated with Outfall 101. Three stormwater samples were collected during the 2<sup>nd</sup> quarter and analyzed for TSS and metals to characterize the stormwater associated with just this inlet, which is anticipated to be the compliance point for Outfall 101 under the new permit.

In addition to this more frequent sampling for this inlet, PEPCO will also be doing field work to determine the available area to site potential stormwater controls for meeting the future Outfall 101 inlets. This work is scheduled to be completed in August 2020.

Our working assumption continues to be that Inlet 87 drains to Outfall 101. We suspect that Inlet 87 drains into the much larger Outfall 101 discharge tunnel (shown in older drawings) and therefore it is difficult to observe flow from Inlet 87 at the point where Outfall 101

discharges to the river. As part of the above-mentioned field work, PEPCO will perform additional investigative work around Inlet 87 to provide more insight into our existing assumption regarding the ultimate discharge point for stormwater flows into Inlet 87.

#### Site Drainage Drawing

No changes to the site drainage drawing were made during the 2nd quarter but changes to the drawing based on the CCTV work are expected to be completed during the 3rd quarter, 2020.

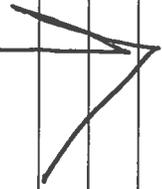

Paragraph 68.a.(3) of the Consent Decree

Storm Drain Inlets Inspection Logs

Paragraph 68.a.(4) of the Consent Decree

#### Monthly Site Inspections

The site-wide inspection logs for April - June 2020 are attached. Benning operating areas continue to implement the best management practices at the site including weekly inspection and maintenance of storm drain inlets, removing the equipment and materials that are no longer in use from the site to eliminate exposure to stormwater, covering or moving indoor the equipment that has the potential to contribute to pollutant loading, and increased supervision of the contractors working at the site to ensure they practice good housekeeping.

Along with these ongoing regular inspection activities, PEPCO has proactively removed ~ 1,000 feet of galvanized fence from the site during the 2<sup>nd</sup> quarter. The removal of the fence will minimize zinc corrosion from weathering and therefore reduce zinc loading to stormwater in these areas.

#### Transformer Storage Shed

Construction was completed by December 31, 2016 and the facility was placed in operation. The storage shed has been operating as designed for temporary storage of off-line and removed from service transformers and other electrical equipment while awaiting recycling or disposal.

Pepco – Benning Road Facility  
Vehicle Maintenance Monthly Inspection Report

Are maintenance activities performed indoors when practical?

Is there any build-up of pollutants in vehicle parking areas, and if so, is there a plan for removal in accordance with the SWPPP?

**Other Indicators of Illicit Discharges**

Is the area clear of any signs of potential illicit discharges such as odors, staining, sheen, residue, etc.?

**Personnel Training and Record Keeping**

Is a program in place to train employees on pollution prevention and good housekeeping procedures?

Are employees trained on proper spill prevention and response for the materials that they handle?

Paragraph 68.a.(5) of the Consent Decree

Status of Stormwater Treatment System

As detailed in the 1<sup>st</sup> quarter, 2020 status report, PEPCO and AECOM identified several corrective actions from the acceptance testing that was completed in the 4<sup>th</sup> quarter, 2019. All of the below corrective actions were completed in the 2<sup>nd</sup> quarter, 2020

1. Roof Drain StormFilter 1D (RD4) – Adjust and secure the water level actuator for future sampling events
2. Jellyfish 1 – Clean the effluent bay, inspect for sediment / debris coming into the effluent bay, adjust the sample trigger for future sampling events
3. Inlet 42 Jellyfish 1A – Adjust the sample trigger for future sampling events
4. Inlet 66 Jellyfish 2A – Adjust the sample trigger for future sampling events
5. Inlet 68 Jellyfish 2B - Clean the effluent bay and inspect for sediment / debris coming into the effluent bay
6. Inlet 108 Jellyfish 3C – Clean the effluent bay and inspect for sediment / debris coming into the effluent bay
7. Jellyfish 3B – Clean the effluent bay and inspect for sediment / debris coming into the effluent bay

The bi-annual maintenance of the stormwater treatment system was completed in April. During this inspection it was noted that the Jellyfish units were experiencing higher solids loading between maintenance cycles so the frequency of cleaning for all Jellyfish units was increased from bi-annually to quarterly. This will help ensure that the Jellyfish units continue to function as designed and do not experience performance issues associated with high solids loading. The most recent maintenance of the Jellyfish units was completed in early July based on this increased maintenance frequency.

The first biannual performance testing was performed in late May and June. A total of four sampling events occurred during which influent and effluent samples were taken from various stormwater treatment devices.

AECOM and PEPCO are working on finalizing the performance test report that will be submitted in August 2020, but initial findings / observations are:

The following observations were made from the site operations and during influent and effluent sample collection:

- Overall, 10 of the 19 treatment units either achieved target removal percentages, or their effluent concentrations were below the NPDES Daily Maximum and Monthly Average limits. Of the remaining nine treatment units, three could not be sampled and five units substantially achieved the performance criteria as the effluent concentrations were above the permit limits only for the monthly average limit for only some metals.

- The following list are the metals and frequency (in brackets) of metals above the monthly permit averages found during testing
  - Copper – (2)
  - Copper and Iron (2)
  - Copper and zinc (1)
  - Zinc (1)
- Some Jellyfish units (JF-1, I-42, I-43, I-44, and I-68) are located in high traffic areas, and sediments and debris potentially entering effluent bays directly from the surface (rather than with the effluent from the treatment unit) could be affecting the sampling results.
- Site-specific conditions and activities may contribute to underperformance by some treatment units. Therefore, iStormwater should be made aware of any site-specific conditions or activities prior to completing O&M activities in order to improve and/or maximise treatment performance.
- The 10-minute delay in influent and effluent sample collection following the initial detection of effluent flow worked well for larger units and/or larger intensity storm events. The 10-minute delay is programmed at each Jellyfish and StormFilter treatment unit, except the roof drain StormFilter units. The two ISCO samplers installed each treatment unit (one at the influent and one at the effluent) are triggered by a single actuator. Sampling is triggered by an actuator installed 2-3 inches from the bottom of the effluent pipe or effluent bay. Once triggered, the 10-minute delay begins. After the 10-minute delay, the influent and effluent samples are collected simultaneously. The use and duration of a delay should be continually evaluated on a treatment unit-specific basis.
- Consistent with Contech recommendations, Pepco has inspected all treatment units on a bi-annual (or more frequent) basis since the treatment system installation was completed in December of 2017. The units and storm drains have been cleaned out annually at a minimum. Inspection and maintenance of the entire treatment system occurred in April of this year and based on PEPCO's O&M contractor, iStormwater, Jellyfish maintenance has been increased to quarterly. This resulted in a noticeable improvement in treatment performance at multiple locations during the most recent performance monitoring.
- Storm event intensity and duration may have impacted the ability to sample the three units that were not sampled during the four storm events.

- While several units achieved only partial compliance with the specified performance standards, effluent samples for StormFilters SF1, SF3A, SF3B, and SF4 which are the treatment units furthest downstream at each Hotspot, either achieved target removal percentages or met the NPDES Monthly Average limits. The overall performance of these Hotspot treatment systems conformed with treatment goals, and stormwater discharges were in compliance with permit limits during the first two quarters of 2020.

Paragraph 68.a.(6) of the Consent Decree

Stormwater Management Training

The attached list includes the names of the employees working at Benning who received the Stormwater Management Training during the period from April - June 2020.

Paragraph 68.a.(7) of the Consent Decree

Stormwater Pollution Prevention Plan

No changes to the Stormwater Pollution Prevention Plan were made this quarter

Paragraph 68.a.(8) of the Consent Decree

Change in Management Responsibilities

No changes in management responsibilities related to NPDES activities occurred this quarter.

Paragraph 68.a.(9) of the Consent Decree

Status of Completion of Transformer Storage Shed

The construction of Transformer Storage Shed was completed by December 31, 2016 and the facility was placed in operation. The storage shed has been operating as designed for temporary storage of off-line and removed from service transformers and other electrical equipment while awaiting recycling or disposal.

## Paragraph 68.a.(10) of the Consent Decree

### Status of Stormwater Retention Project

As reported in the 2018 2nd quarter status report, Pepco determined that the Stormwater Retention Project described in Section VIII of the Consent Decree was not technically feasible and paid the stipulated penalty of \$500,000 to EPA in August 2018 for not implementing this project. As noted in the third quarter, 2018 status report, although not a requirement under the Consent Decree or the permit, Pepco continues to evaluate alternative options for managing stormwater discharges to Outfall 101.

As noted in Paragraph 68.a(2) section of this status update (and in the status update for the first quarter of 2020), PEPCO recently closed off non-functioning stormwater inlets and is now monitoring stormwater only at inlet 87. As part of this effort PEPCO, continues to assess stormwater inlet 87 in conjunction with its technical consultant Princeton Hydro to determine next steps for managing stormwater flows to Outfall 101. Details of this review are included in the Paragraph 68.a.(2) section of this status update.

Paragraph 68.a.(11) of the Consent Decree

Description of Non-Compliance

There were no non-compliance events for the 2<sup>nd</sup> quarter, 2020.
